## **Workshop on C for III Sem**

### **Aim of Workshop:**

This workshop is designed for beginner programmers, or those who are new to the C programming language. C, is the basic language of all advanced computer languages. For example, if you want to learn C++, which is an object-oriented language, you need to know the C language well beforehand. Once you master C programming, you can easily learn another specified language.

### **Number of Participants:**

This workshop is managed in one batch having a 25 students' respective batch of III CS A & B Section.

This workshop is managed in one batch having a **51student's III CS A Section.**

The Workshop is taken by Mr. Sandeep Tuli, PIET Jaipur.

### **Benefits to the participants:**

There are numerous benefits from learning C; however, the most important benefit is that the C programming language is recognized worldwide and used in a multitude of applications.

The most important benefit for 3rdSem students is that they were able to understand the basics of C language in which they were weak.

This workshop helped 3rdSem students to understand both the academic subject one is DSA and another is OOP's.

### **Topics Covered:**

1. Decision making Statements
2. Conditional Statement
3. Array

### **Snapshot of the Workshop:**

**End of The Workshop:** After the successful completion of the workshop feedback of the workshop has been taken by the students through the Google form which has provided a positive response.

Some student after workshop implemented the concept of N Layer Architecture in its project having excellent comment by Industry Expert.
